The Ocean in a Changing World
Contents

Oceanic Projects and Programmes
- IGBP and big observational campaigns.................................4
- SOLAS and Cape Verde scientists establish an atmosphere and ocean observatory off North West Africa........6
- GLOBEC: ten years of research........................................9
- Three IMBER imbizo workshops on ecological and biogeochemical interactions......................12
- New developments in marine ecosystem research: recommendations for IMBER II................14
- Global change and the coastal zone: current LOICZ science activities..........................16
- Working groups of the Scientific Committee on Oceanic Research (SCOR)............18

The Ocean in a High-CO2 World:
- The Second Symposium on Ocean Acidification........22

Science highlights from the symposium
- Reef development in a high-CO2 world................................................24
- High vulnerability of eastern boundary upwelling systems ..................................25
- Changes in the carbonate system of the global oceans........................................25
- Salmon pHishing in the North Pacific Ocean.............................................26
- Consequences of ocean acidification for fisheries........................................26
- Impact of ocean acidification on underwater sound....................................27
- The early development of oysters........................................................27
- Low winter CaCO3 saturation in the Baltic Sea...........................................28
- Mechanisms linking climate to ecosystem change....................................28
- Impact of ocean acidification on marine snails and deep-sea corals..................29
- Natural CO2 vents reveal ecological tipping points......................................30
- From the lab to models........................................................................29
- Economic impacts of ocean acidification.................................................30
- Ocean acidification: connecting the science to policy..................................31

IGBP Network News...........................................................................32

Cover photo: Arne Körtzinger, IFM-GEOMAR, Kiel/Germany
Recovery of a sediment trap from a long-term mooring at the Cape Verde Ocean Time Series site (tenatso.ifm-geomar.de, see article page 6) on the French ship L’Atalante in February 2008 as part of the German SOPRAN project (sopran.pangaea.de).
