

# Corrigendum

Wu L (2014) China's emissions: glimpsing the peak. *Global Change* 83: 16-19.

Page 18, Figure 1: The pathway for France was based on incorrect emission data. The correct pathway is in the revised version of the figure below.

Page 18, first column, line 16: The reference to “France” is incorrect in view of the revision to Figure 1. The sentence should read, “The black pathway allows China’s per capita emissions to peak at a level similar to that of Canada.”

Page 17, middle column, line 24: The sentence beginning with “Its per capita energy consumption...” should be disregarded in view of the correction to Figure 1.

These mistakes, which do not affect the broader conclusions of the article, have been corrected in the online versions.
